Abstract

An ajimycin crystallization and its preparation method mainly features that water-contained ajimycin is dissolved in the mixture of water soluble organic solvent and water, and crystallizing, after drying, the non-two-aqueous crystallized-type Ajimycin is obtained. This invention overcomes the defects of the product produced by the existing technology having unstable quality, difficult production and high cost, and the product has product stability better than the exported product, strong fluidity, easy industrialized production and simple preparation method, easily obtained reagent.
